DISCOVER A NEW DIMENSION OF RUNNING YOUR HOSPITALITY BUSINESS WITH  
**GARSON ANDROID APPLICATIONS**

# GARSON POS

## TOUCH SCREEN POS

Garson is suitable for work on all types of touchscreen devices (monitors, PDAs and mobile devices, POS terminals). Clear and simple interface allows quick order taking, payment processing, balance insight and other daily operations to be performed at the POS location.

The graphic display of the restaurant and table layout, intuitive icons, recognisable images of items, recording of different payment methods and the printing of separate orders for the bar and kitchen guarantees precise and fast work.

## PRINTING THAT SUITS YOU

The appearance of printed bills and orders can be customised, and printing can be done on remote printers.

Garson allows venues to customise the appearance and choice of information that appears on printouts. Each printer can have its own settings so that bar staff receive their portion of the order while in the kitchen the order is printed in the most suitable form for preparing food.

## SECURITY

Garson provides you with an access rights system so you can limit and parametrize access for different staff groups. Employees sign in with their identification cards and unauthorised access to data is not permitted.

All important events such as arrival at work, issuance of bills, cancellation, settlement and closing the work day are separately recorded, whereby better insight is provided into the work of your staff.

## CUSTOM CONFIGURATION

Thanks to its flexibility, Garson adapts to the operations of any venue regardless of size or type of service. It is used in classic and fast food restaurants, cafés, pubs, pastry shops, nightclubs, bars and hotels.

In addition to the choice of necessary functionality, it is possible to enter custom settings to create a large number of bars, points of sale and kitchens and to define different configurations for each point of sale.

## CUSTOMER LOYALTY

Various options are available to help you establish the best possible relationship with your customers:

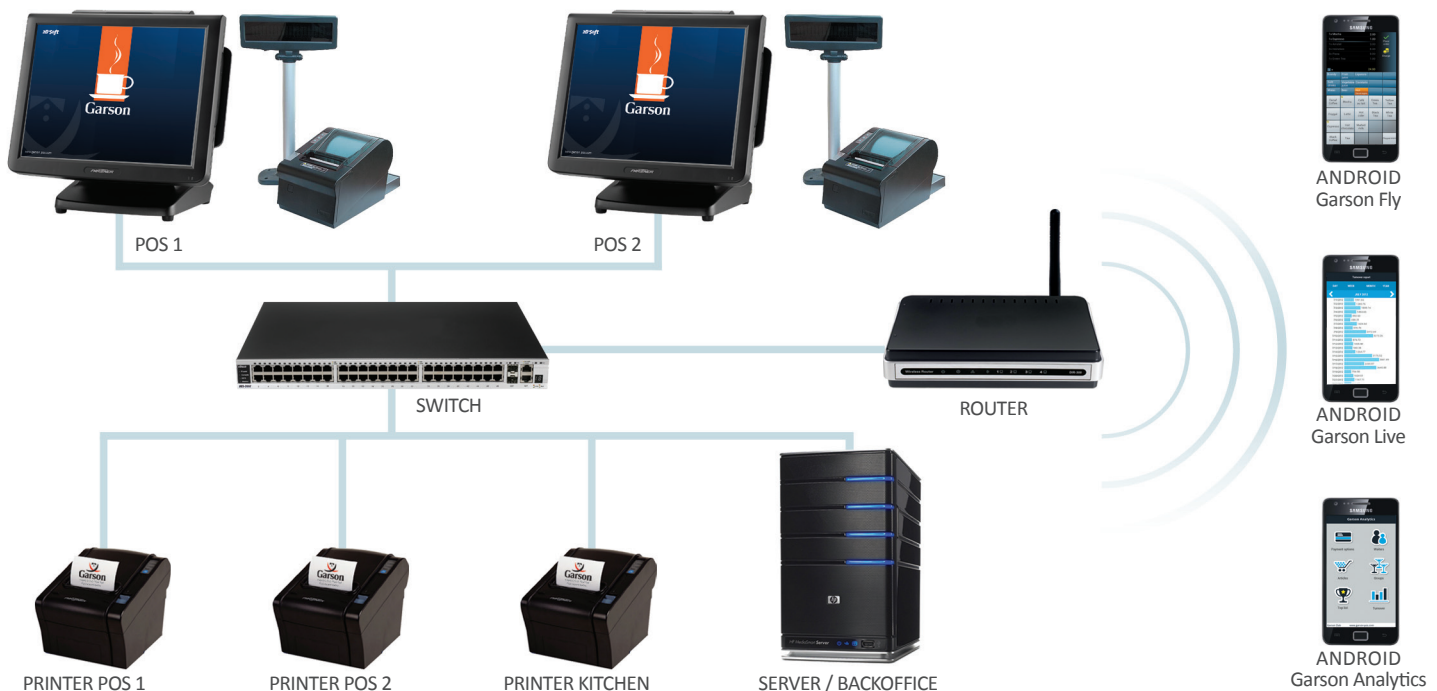

- allocation of personal cards and special privileges to individual guests
- records of VIP guests and club members
- creation of special promotions, happy hour offers and different price lists
- approval of discounts at different levels

## ANDROID POS

Garson Fly is an Android application that is used for taking orders and collecting payment at the table.

Operations available in Garson Fly match those in a standard Garson POS application: choice of groups and individual items, quantity change, cancellation of items or entire orders, assigning modifiers, table transfer, discount approval and others.

# GARSON BACKOFFICE

- System configuration for individual venues or for several venues within the same company
- Customisation of products, services, price lists, standards, modifiers and additional item descriptions
- Creation and setup of loyalty programmes
- Sales analysis employing a wide range of parameters
- Flexible warehouse operations
- Overview of finances and reporting for owners and managers
- Secure access to options and data

## REMOTE BACKOFFICE CONNECTION

Garson Backoffice functions as an independent application to Garson POS. This means it may be installed in the location that is most suitable for you: on a computer in the office of the same venue, the laptop of the owner or manager, the company's central server or on a cloud.

## YOUR BUSINESS ON THE GO

### GARSON ANALYTICS

Analyse your operations and turnover at any time, any place with your Android device.

### GARSON LIVE

Offer management staff a real-time insight into all the important aspects of daily operations via Android mobile devices.

## FINE TUNING FOR THE MOST DEMANDING

Through many years of collaboration with a large number of establishments, we have come across different, specific features of running a business and management methods. By supporting these special functions, we have acquired vast experience in identifying and solving the problems faced in this industry.

As a result, Garson has been created to answer even the most demanding customer requirements. It easily expands with the growth of your business and quickly adapts to all changes in hospitality management trends.
